

PROJECT Approved For Release 2000/08/08 : CIA-RDP96-00789R00190003-8

#16  
0922DATE: 29 Oct 86  
SESSION: 012  
SOURCE: 101START: 0937  
SANCTUARY: 0937  
TARGET: 0939  
FINISH: \_\_\_\_\_COORDINATE: NONE REQUIRED (THE ROAD)

## FRONTLOAD:

"WE WILL BE TRAVELLING BACK IN TIME TO THE PERIOD 7-22 MAR 1984. TO DATE WE HAVE COVERED THE PERIOD 7-20 MAR 1984 AND NO LONGER NEED TO CONCERN OURSELVES WITH THOSE DATES EXCEPT AS REFERENCE POINTS. WE WANT YOU TO TRAVEL TO THE ROAD WE HAVE VISITED IN THE PAST TO A TIME JUST AFTER MID NIGHT ON 21 MAR 1984. WE ARE SEARCHING FOR A SPECIAL EVENT WHICH YOU WILL KNOW WHEN YOU SEE IT. AT ANY RATE WE WILL PROCEED ALL THE WAY THROUGH 22 MAR 84, THE TERMINUS DATE. AS BEFORE VIEW THE ENTIRE ROAD AND REPORT THE DAY'S EVENTS AS THEY OCCUR."

NOTE: VERY long delay reaching sanctuary  
=  
15 minutes VS NORMAL 6-8 MINUTES  
 NO EXPLANATION EXCEPT POSSIBLE BACK PAINS.

- Possibilities:
- (1) VOICES IN OTHER ROOM
  - (2) ANXIETY OVER FRIDAY MEETING WITH ACSI
  - (3) ANXIETY OVER MISSION
  - (4) BACK PAIN

## NOTES:

- (1) COMPLAINING OF TIGHT BACK MUSCLES.
- (2) ME - FRUSTRATION DUE TO SICK CHILD,  
very distressful joint pains.
- (3) SOME VOICES FROM CRV ROOM.

DRAFT: \_\_\_\_\_

TYPING: \_\_\_\_\_

PROOF: \_\_\_\_\_

SESSION 12

PAGE 2

→ IT IS NOW 29 OCT 86. TRAVEL BACK TO A TIME JUST AFTER MIDNIGHT ON 21 Mar 1984. DESCRIBE THE ACTIVITIES AT THE ROAD.

★ HARD, MEN out, single file, patrols, several groups, SITE II QUIET, WIDE SPOT -- nothing -- SITE I, QUIET 0100 ----- SITE II 0200 ----- TROOPS moving on both sides of the road, about  $\frac{1}{3}$  people awake. 0300 ----- 0400 ----- STILL NO TRAFFIC 0500 ----- PATROLS CROSSING ROAD COMING BACK. TROOPS AT WIDE SPOT STIRRING SOME. 0600 -----

→ HILL PEOPLE

★ some down closer to road. more than just a few. low profile, 1ST light, Patrols coming back in now. maybe four patrols. Wide spot, breakfast activity. sound of generators. Very loud. Big generators. either very big or very primitive. Some traffic now from SITE I. small convoy activity. 0700 ----- more traffic starting now. CONVOYS, small convoys. Hill people watching.

→ WATCHING

★ from mts on hill overlooking wide spot. They are spread out. Having some difficulty breathing as though the air very thin in their camp area. Noises from different areas. Wide spot - no noise

→ NOISES

★ By the tower. Very loud hum like a generator (AOL) smell like dehydrated eggs

PAGE 3

UP the road. SITE II, normal activity. Then in street  
 not many women out now. 0800 - - - Vehicles  
 moving but onto road now. People in hell still watching  
 wide spot. Spread out

→ This is at the wide spot

★ Yes. They are spread out about 100 yds apart. Small  
 arms. 0900 - - - traffic moving now. always in  
 groups. 1000 - - - SITE II, sweet smell, Aromatic  
 Woods, Spices, Wide SPOT - - Improving, people putting up  
 lines, looks like clothes lines (mat height) small cables.  
 1100 - - - A feel of bureaucracy, paper work ~~there~~  
 here. Wide SPOT - - cable hooked up - possibly 292 antenna  
 Raw Data - - tall, narrow, wires, cross beams jutting  
 out, some tents now - GP medium.

→ Look inside

★ Table, papers, maps (Raw Data - large, colors, red circle  
 drawn on, compass, Center pole is lantern. Should be a  
 heater in here. two beds. Other tent... administrative  
 feeling like a cross between SJ and orderly room & can't  
 explain that

→ Don't try.

★ Back on the road now. Site II roadside as you come  
 in - - like a checkpoint - - past that checkpoint there is a  
 pole like barrier across the road which can raised or  
 lowered - - painted bright color. This is new. Control  
 only not strong barrier - symbolic

→ OK - its noon now

PAGE 4

★ Its noon 1200 - - - Smells of spicer, open fires, strong smell of cheese at site II. Another 1<sup>st</sup> ~~foot~~  
 Foot Traffic going single file on each side of road proceeding from site II towards site I, small arms.  
 (Ad) Weapons look like AK-47 - rough wood, curved, continuing along the road. Well beside the road (water). Checking on hill people now -- just waiting, decreased numbers now. Maybe important - two hill people and 3<sup>rd</sup> person in uniform observing. Dark uniform, bearded, turban on his head. Dark also. Western style uniform. Up the road now - SITE I. 1300 - - - Back up the road, wide spot

★ <sup>maybe our man</sup>

→ In the wide spot, look around, anything new

★ Slat trenches for latrines, I don't see the submarine. Feel relieved because it should not be out ~~here~~ here. More improvements. Maybeconcertina wire out. Both outside and around area ~~is~~ inside.

→ Inside

★ around the van by the tower

→ OK move ~~back~~ on

★ Back to the road. It seems to be cloudy because it shifts from light to dark like clouds moving in front of sun. Troops still on road.. Pole across the road -- hot a military feeling - not a custom post. Vehicles moving along road. 1400 Hours -- Clouds still moving - Hard time ~~breathe~~ breathing again. Hill people again -- More dark uniforms. Look like Asian-Indians 1500 - - -

Page 5

On The road. Wide spot - (drop off ---) strange vehicle large, elongated 1932 Mercedes. Raw data - shiny light brown color, open body, separate fenders, crowded, a lot of people inside. Flags on front fenders, flags on rear fenders, running boards. Seems ~~to~~ strange in this area. Column of troops on road (both side) now approaching SITE #. Some civilian foot traffic but not much.

Cheek point -- site II **1600** - - - smell of bitter tea in the area. Sound of people chanting and intoning. I'm moving to site I, I'll be back here in a minute - still at **1600** moving back up the road.

→ You seem to be puzzled or hesitant

★ I'm just trying to make sure I don't cause something to happen. AOL Drive -- explosion large. A lot of debris, dust, caving in -

→ Let's examine the explosion

★ On The road near wide spot - same area which made my hair stand up - When I go to center point at same time, I see people sitting in AAA guns - things that look twin barreled. I'm confused. Why would AAA guns be here

→ Stop now. I want you to relax and stop trying to explain the occurrence. View the incident and I'll call you when I'm ready - - - - (2 minutes) -- begin now

★ Going back to area - large explosions coming down, rocks looks like small hunks of fine coal. Lot of dust - lot of noise. Moving down the road. The column is laying down. The hill people are watching. Not responsible for this. Wide Spot. Activity around the tents. on site II of compound.

Page 6

Two twin barreled weapons pointing up to the hills. Weapons appear to recoil, ultimately. ~~Both~~ Both weapons are in action. Pointing in direction of explosion.

→ Stay with those weapons describe how they function.

★ They work in tandem. Different. They take a lot of training. Mastery is not a science, it's an art. Maybe radio or signal controlled. Also manual operations.

→ How do you make them work

★ I think 2 ways. One is like a trigger or lever. Other has something to do with black box. Lever is high up - exposed even. Black box is lower further down. Both barrels long tapering light brown, self propelled not towed. Components - two together in tandem -

→ Describe the action

★ recoil, maybe an electrical spark, wires, I want to say gas generated but that's not. Someone sits high up. Think it can be operated from inside.

→ Inside.

★ Inside the self propelled apparatus - half track

→ Look inside the self propelled apparatus

★ Compartment, light, guidance system, external attachment, radar of some sort. Inside it's dark like red inside, crew - one person has earphones. Other looking at screen. Two levers - three man crew inside. It pulverizes the area. It may have been fired before. Two big craters, like burned

Page 3

Inside is frugal and rough. NOT finished. Not designed for comfort. Some protrusions where people could bang against them. Feeling it would be difficult to use if moving. There is two crossed feelings ① high tech electronics with primitive crude mechanics. Crew members wear caps like pilots caps from WW I. ear flaps

→ Crew on outside - one

\* one man sitting up. a technician to handle external apparatus. He may travel in other vehicle.

→ Go to when its used

\* its hell inside Kerchunk Kerchunk (bottom sound) top sound (Whoosh, Whoosh, rattle)

→ Generators The explosions describe

\* real closed together. Almost simultaneous. Debris is grey colored, very fine, settles slowly, dust.

→ The thing that explodes, what happens to it

\* I don't know what was here or why they fired on it. I can't tell if its caused by the big guns.

→ Back to weapon, look at them closely. They are related - not the same - How do they cause the explosion

\* Strange. The long two barrel gun - Tremendous amount of power - asking for a picture... Getting a spectrum of contained light ~~in~~ in a container Bright light - Blue. But some colors you can't quite see. The one next to it - it has four barrels, smaller, narrower than the two large barrels.

- When it is fired describe the blue light
- ★ Blue light is the picture I got when I ask for it. When its fired --- high angle ?? But is used for direct fire. Light is major component. constructed light --
- How does the light cause the explosion
- ★ I don't know - maybe light has something else to do with it. There are wires, AOL like 3.5 when fired -- all the wires came back in your face. Has big shocks on it.
- Follows from the tube from the moment its fired until it hits. Describe what leaves the barrel and what it hits.
- ★ Having trouble picking up target; if there really was a target. Projectile isn't there. Compacted power. Vapor of a gun coming out of barrel.
- Is this what caused your hair to stand on end
- ★ I don't know
-
